COURSE OVERVIEW

What This Course Is About

This **Manual Testing Course** is purpose-built for students, freshers, career switchers, and working professionals who want to break into software quality assurance. No prior coding experience is required — just curiosity and commitment.

What You Will Learn

- Software Testing Fundamentals & QA Principles
- SDLC Models — Waterfall, Agile, V-Model
- STLC Phases & Test Planning
- Test Case & Test Scenario Writing
- Defect Reporting & Bug Life Cycle
- Jira Basics & Agile Scrum Process
- Real-Time Project Testing
- Resume Preparation & Mock Interviews

Designed For

- Fresh graduates entering the tech industry
- Career switchers from non-IT backgrounds
- Working professionals seeking upskilling
- Anyone interested in QA as a career path

Learn Complete Manual Testing from Basics to Real-Time Project Level — in just 2 months.

WHY JOIN US

Why Choose XpertsEdge & Who Can Join

Why Choose This Course

Beginner-Friendly

No coding required. Start from absolute zero with structured, step-by-step guidance.

Real-Time Project Training

Work on live e-commerce, banking, and enterprise projects to build real experience.

Hands-On Practice

Write actual test cases, execute scenarios, and report defects using industry formats.

Interview & Resume Support

Mock interviews, HR round prep, and professional resume building included.

Who Can Join

- 🎓 Students
- 🆕 Freshers
- 🔄 Career Switchers
- 💼 Non-IT Candidates
- 👩‍💻 Working Professionals
- 🎓 Any Graduate

If you can use a computer and communicate in English, you have everything needed to begin this journey.

CURRICULUM

Topics Covered

A comprehensive, industry-aligned curriculum covering every dimension of manual software testing — from fundamentals to tools to real-world project workflows.

🧪 Testing Basics

- Software Testing & QA vs QC
- Verification & Validation
- Error, Bug, Defect & Failure
- Seven Principles of Testing

🔄 SDLC & STLC

- Waterfall, V-Model & Agile SDLC
- STLC Phases in Detail
- Test Planning & Entry/Exit Criteria
- Requirement Analysis

✅ Testing Types

- Functional & Regression Testing
- Smoke & Sanity Testing
- Integration & System Testing
- UAT & Exploratory Testing

🛠️ Tools & Process

- Jira for Bug Tracking
- Defect Life Cycle
- Test Case Template & Defect Report
- Agile Scrum & Test Summary Report

COURSE MODULES

6 Structured Modules — Beginner to Job-Ready

Each module is carefully sequenced to build on the last, giving you layered expertise that mirrors a real-world QA role.

Module 1: Testing Fundamentals

Testing basics, QA process, bug concepts, verification, validation, and the seven testing principles.

Module 2: SDLC & STLC

SDLC models, Agile process, STLC phases, requirement analysis, and test planning essentials.

Module 3: Test Case Writing

Test scenario design, test case format, positive/negative testing, expected vs. actual results.

Module 4: Testing Techniques

Smoke, sanity, regression, UAT, boundary value analysis, and equivalence partitioning methods.

Module 5: Defect Mgmt & Jira

Bug reporting, severity and priority, defect life cycle, Jira ticket creation and defect tracking.

Module 6: Project & Career Prep

Real-time project testing, test execution, test summary report, resume guidance, and mock interviews.

SUCCESS ROADMAP

Your 2-Month Manual Testing Success Roadmap

A structured, milestone-driven journey from complete beginner to job-ready manual tester — every week purposefully designed to build skills and confidence.

1

Week 1–2

Testing fundamentals, QA principles, SDLC models, error vs. defect concepts, and requirement understanding.

2

Week 3–4

STLC phases, test planning, test scenario writing, test case documentation, positive and negative testing.

3

Week 5–6

All testing types, test design techniques, defect reporting, bug life cycle, severity and priority classification.

4

Week 7–8

Real-time project execution, Jira, Agile Scrum, test summary report, resume building, and mock interviews.

🏅 Month 1: Foundation

Testing Basics · SDLC/STLC · Test Cases · Testing Types

🚀 Month 2: Project + Career

Real-Time Project · Jira · Agile · Resume · Mock Interviews

🎖️ Final Badge

Beginner → Job-Ready Manual Tester

MONTH 1

Month 1 — Foundation & Documentation

Focus: Build a rock-solid understanding of software testing fundamentals, documentation, and testing methodologies that every QA professional must master.

Topics Covered

- Software Testing Basics & QA vs QC
- SDLC Models — Waterfall, Agile, V-Model
- STLC Phases & Test Planning
- Test Scenario & Test Case Writing
- Positive and Negative Testing
- All Major Testing Types
- Test Design Techniques
- Requirement Understanding & Analysis

Month 1 Outcome

By the end of Month 1, students will be able to:

- Read and analyze application requirements
- Write professional test scenarios and test cases
- Distinguish between all major testing types
- Understand the complete SDLC and STLC workflow
- Apply equivalence partitioning and boundary value analysis

You'll finish Month 1 ready to document and design tests for any real application.

MONTH 2

Month 2 — Project Execution & Career Readiness

Focus: Apply your knowledge to real-time projects, master industry tools, and prepare yourself for professional manual testing interviews with confidence.

Topics Covered

- Real-Time Project Test Case Execution
- Bug Identification & Defect Reporting
- Severity, Priority & Bug Life Cycle
- Jira Ticket Creation & Defect Tracking
- Agile Scrum Process & Sprint Ceremonies
- Test Execution & Test Summary Report
- Professional Resume Preparation
- Mock Interview Practice & HR Round Prep

Month 2 Outcome

By the end of Month 2, students will be able to:

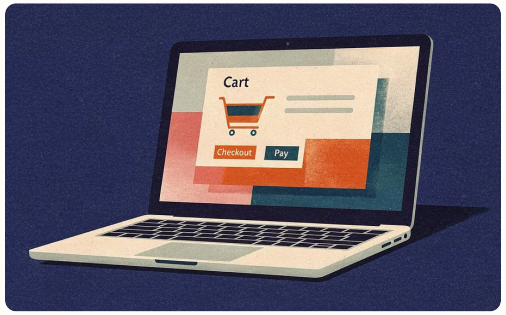

- Test real applications end-to-end independently
- Report defects professionally using Jira
- Explain project experience in interviews
- Write and present a test summary report
- Attend manual testing interviews with confidence

Graduates leave with a polished resume and real project experience to show employers.

REAL-TIME PROJECTS

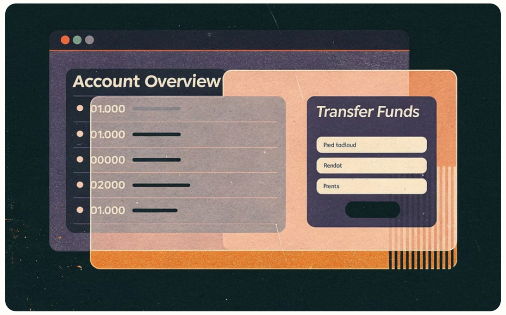

Real-Time Project Practice

Students don't just study theory — they **test real applications** across three industry-representative domains, building a project portfolio they can speak to confidently in interviews.

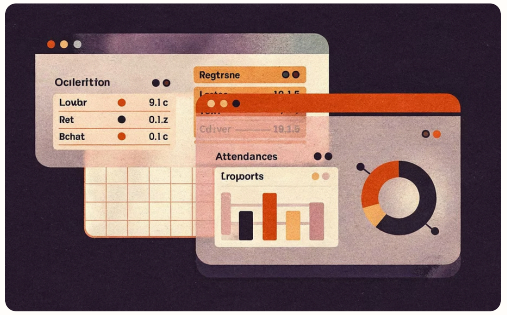

Project 1: E-Commerce Application

Test user login, product search, cart management, checkout flow, payment validation, and order confirmation. Report defects with proper severity and priority.

Project 2: Banking Application

Validate customer login, account summary display, fund transfer workflows, transaction history accuracy, and all input field validations for a secure banking system.

Project 3: Student Management System

Test student registration, course enrollment, attendance tracking, report generation, and admin dashboard functionality across multiple user roles.
