COURSE OVERVIEW

What This Course Is All About

The XpertsEdgeTechnologies API Testing Course is meticulously designed for **students, freshers, manual testers, automation testers, career switchers, and working professionals** who want to build industry-relevant API testing skills from the ground up.

You will gain hands-on expertise in **REST API concepts, HTTP methods, status codes, headers, request and response validation, JSON, XML, authentication testing, Postman, Swagger documentation, test case writing, defect reporting,** and real-time API project testing — everything a modern QA engineer needs to succeed.

Learn API Testing from Basic to Real-Time Project Level — structured, practical, and job-oriented from Day 1.

WHY XPERTSEDGE · WHO CAN JOIN

Built for Beginners. Designed for the Industry.

Why Choose This Course

- → Beginner-friendly, step-by-step training approach
- → Practical, hands-on Postman sessions every week
- → Real-time API project testing experience
- → Authentication & JSON response validation practice
- → Test case writing and bug reporting guidance
- → Interview preparation + resume support included
- → 100% job-oriented curriculum and training

Who Can Join

- 🎓 **Students & Freshers**
- 🖱️ **Manual Testers**
- ⚙️ **Automation Testers**
- 🔄 **Career Switchers**
- 💼 **Working Professionals**
- 🎓 **Any Graduate**

No prior API knowledge required. If you can use a browser, you can start this course.

CURRICULUM

Topics Covered

A comprehensive, structured curriculum spanning the full API testing lifecycle — from fundamentals to real-time tooling.

🔌 API Basics

- What is an API?
- Client and Server architecture
- Frontend and Backend flow
- REST API request and response

🌐 HTTP Concepts

- GET, POST, PUT, PATCH, DELETE
- Status codes (2xx, 4xx, 5xx)
- Headers and authentication
- Query params and path params

📄 Data Formats

- JSON and XML basics
- Request body and response body
- Payload validation
- Schema validation basics

🛠️ Tools & Process

- Postman and Swagger
- Newman basics
- Jira for defect reporting
- API test case writing

COURSE MODULES

6 Structured Learning Modules

1

API Testing Fundamentals

API basics, REST API, client-server flow, endpoints, HTTP methods, requests and responses.

2

Postman Tool Training

Collections, environments, variables, params, headers, body, authorization, scripts, and test execution.

3

Request & Response Validation

Status code validation, response body, headers, JSON validation, and schema basics.

4

Authentication Testing

Basic Auth, Bearer Token, API Key, JWT token basics, login API flow, and authorization validation.

5

Real-Time API Testing

Test case writing, positive and negative testing, defect reporting, Jira basics, and test summaries.

6

API Automation Basics

Newman, Rest Assured intro, Java basics for API automation, CI/CD concepts, and GitHub guidance.

SUCCESS ROADMAP

Your 2-Month API Testing Success Roadmap

A clearly structured learning journey — from complete beginner to confident, job-ready API tester.

Month 1 — API Foundation

API basics, REST API, HTTP methods and status codes, Postman collections and environments, JSON and XML basics, request and response validation.

1

2

Month 2 — Project + Career Prep

Real-time API project testing, authentication flows, test case writing, bug reporting with Jira, Newman basics, Rest Assured intro, resume preparation, and mock interviews.

3

🏆 Final Outcome

Beginner to Job-Ready API Tester — equipped with real project experience, interview confidence, and a polished resume.

This roadmap is designed so every student — regardless of background — can progress steadily and exit the program confidently interview-ready.

MONTH 1

Month 1 — API Foundation & Postman Practice

Month Focus: Build a rock-solid API testing foundation and become confident with Postman as your primary testing tool.

Core Concepts

- API basics and REST API concepts
- Client-server architecture
- HTTP methods and status codes
- Headers, query params, path params

Data & Validation

- Request body and response body
- JSON basics and XML basics
- Basic response validation
- Payload and schema basics

Postman Hands-On

- Collections and environments
- Variables and authorization
- Sending GET, POST, PUT requests
- Viewing and analyzing responses

Month 1 Outcome: Students can understand API flow, send requests using Postman, validate responses, and explain API testing concepts confidently.

MONTH 2

Month 2 — Real-Time Project & Career Readiness

Month Focus: Transition from learning to doing — test live APIs, report defects professionally, and walk into interviews with confidence.

Project Testing

- Real-time API project testing
- Positive and negative test scenarios
- API test case writing
- Bug reporting and Jira basics

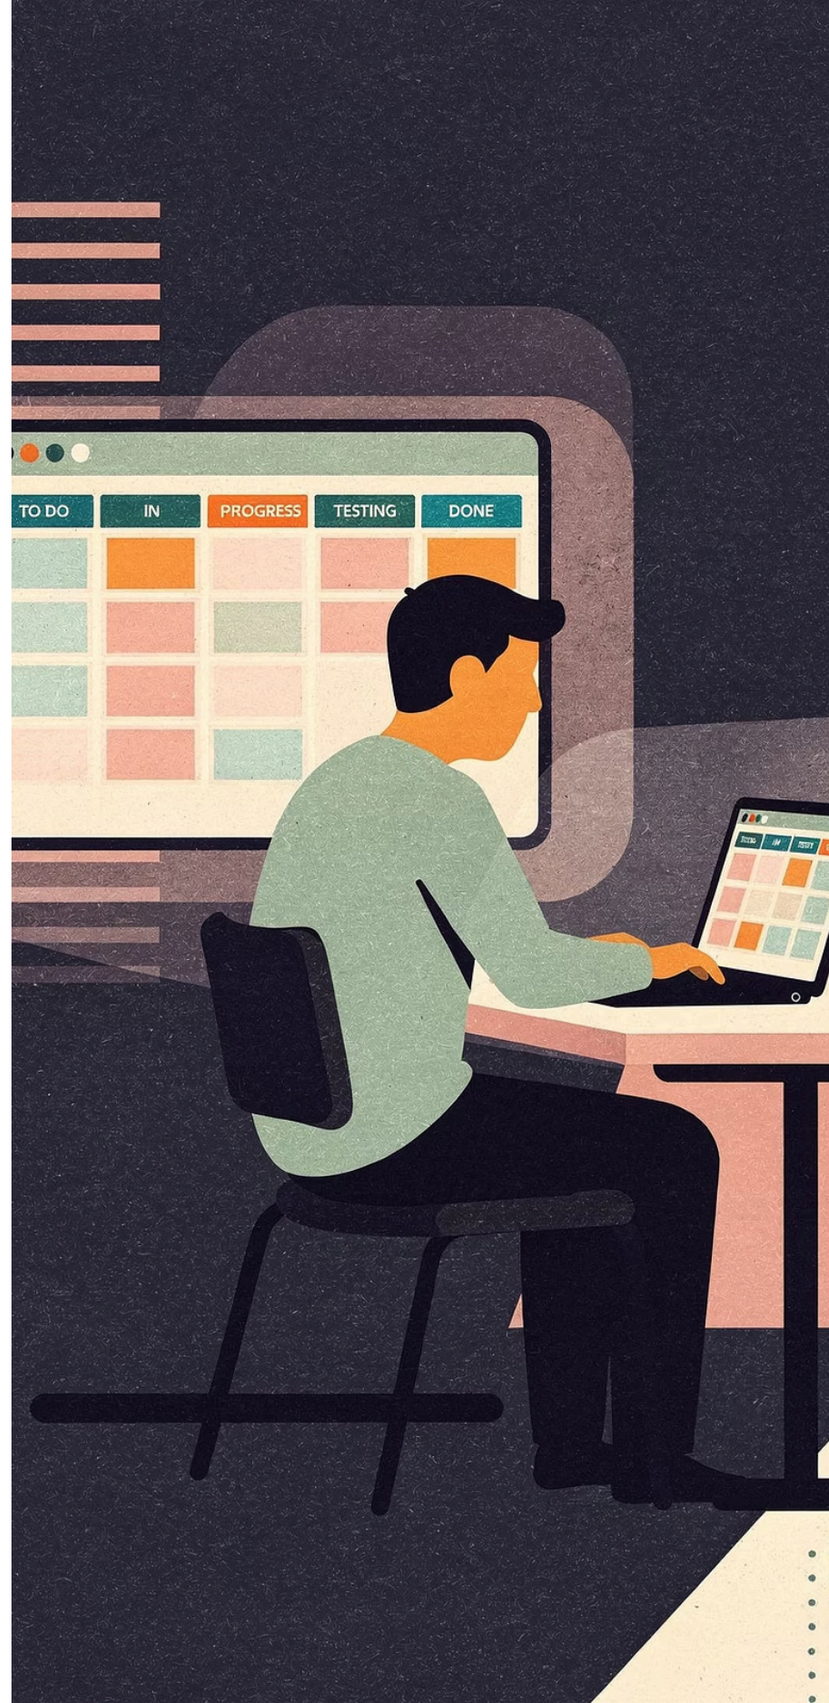

Authentication & Security

- Bearer Token and API Key validation
- JWT token basics
- Login API flow testing
- Authorization validation

Automation & Career Prep

- Newman basics and Rest Assured intro
- Java basics for API automation
- Resume preparation guidance
- Mock interview practice

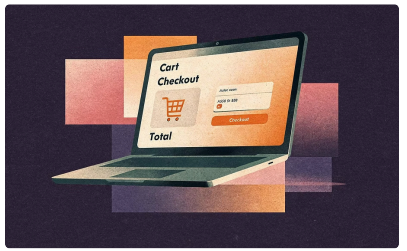

Month 2 Outcome: Students can test real-world APIs, validate authentication flows, report defects professionally, and perform confidently in API testing interviews.

REAL-TIME PROJECTS

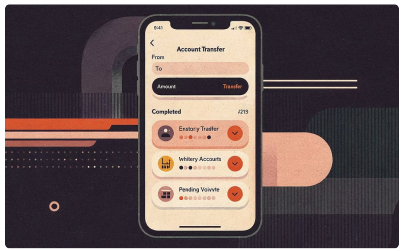

3 Real-Time API Testing Projects

Gain practical, resume-worthy experience by testing real-world API scenarios across three industry-relevant domains.

Project 1: E-Commerce API

Test Login API, Product API, Cart API, Order API, and Payment APIs. Validate status codes, response bodies, and report defects.

Project 2: Banking API

Customer login, account details, fund transfer, and transaction history APIs. Focus on authentication validation and negative testing.

Project 3: Student Management API

Registration, course, attendance, and reports APIs. Validate CRUD operations and JSON responses end to end.

Launch Your API Testing Career Today

Join XpertsEdgeTechnologies and gain the skills, confidence, and real-world experience to land your first role as an API Tester or QA Engineer.
