🚀 XPERTSEDGE TECHNOLOGIES

DevOps Track – CI/CD + Docker + Cloud Basics

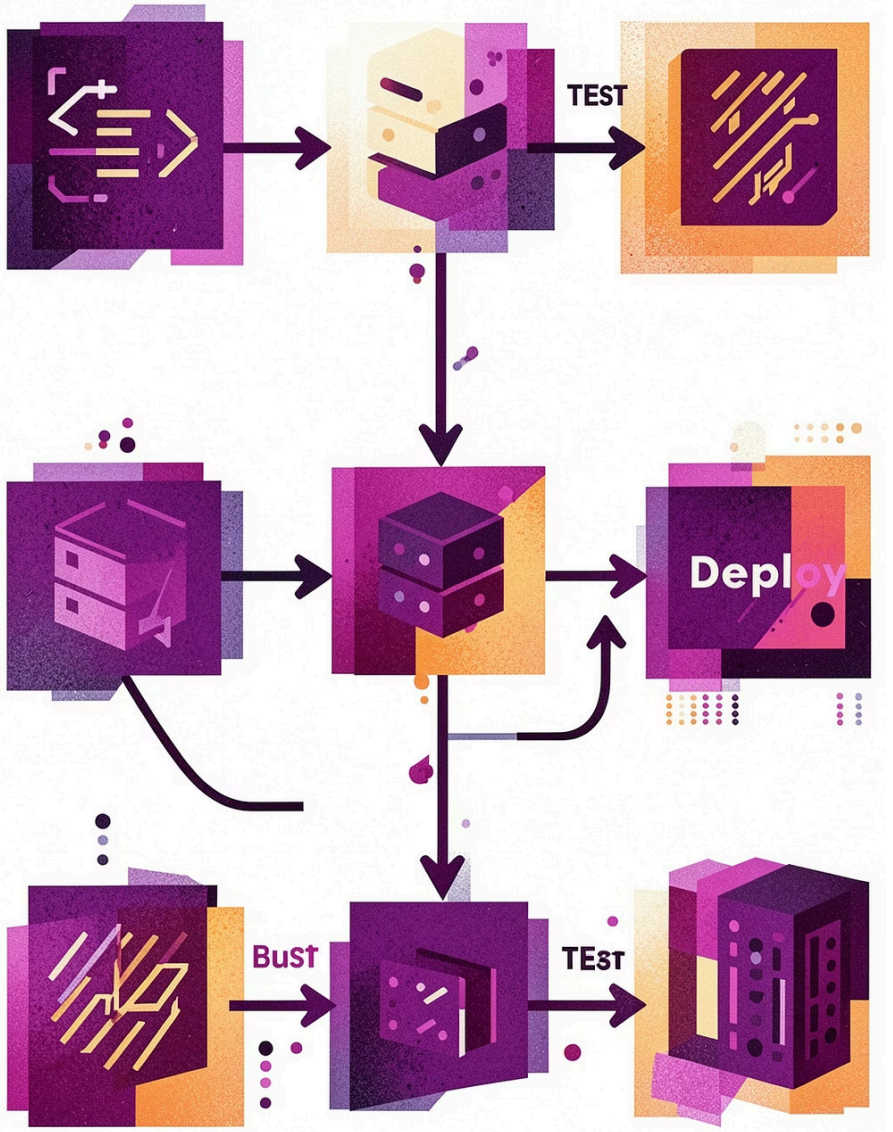

Become DevOps-Ready in 2 Months

Master **Git** · **Jenkins** · **CI/CD** · **Docker** · **Cloud Basics** through hands-on labs, a real-time deployment project, and structured interview preparation — all in just 8 weeks.

🧪 Hands-On Labs	🚀 Real-Time Project	🎯 Interview Prep
Practice with real tools and pipelines	CI/CD deployment you can showcase	Resume support + mock interviews

COURSE OVERVIEW

What This DevOps Course Covers

This intensive 2-month program is designed for students, freshers, testers, developers, career switchers, and working professionals who want to confidently navigate modern software delivery. You will move from zero DevOps knowledge to practical, job-ready skills through structured, hands-on learning.

Core Learning Areas

- DevOps fundamentals and lifecycle
- Git and GitHub version control
- CI/CD pipeline design and execution
- Jenkins build automation
- Docker containers and Dockerfile
- Cloud deployment basics (AWS / Azure)

Career Readiness

- Real-time project practice
- GitHub portfolio setup
- Resume writing support
- Mock interview preparation
- Job-oriented training approach

Learn DevOps from Basics to Real-Time CI/CD Deployment Level

Why Choose This Course — and Who Should Join

Why Choose XpertsEdge DevOps Track

Beginner-Friendly Structure

No prior DevOps experience required — we start from the ground up.

Hands-On CI/CD Practice

Work with real pipelines, Jenkins jobs, and Docker containers.

Real-Time Deployment Project

Build a portfolio-ready CI/CD project you can present to employers.

Resume + Interview Support

End-to-end career guidance with mock interviews and resume reviews.

Who Can Join

Students & Freshers

Manual & Automation Testers

Developers

Career Switchers

Working Professionals

Any Graduate Interested in Cloud

CURRICULUM

DevOps Topics Covered

The curriculum is organized into four core pillars — each building on the last — to give you a complete, end-to-end view of modern DevOps practice.

🔧 DevOps Basics

- DevOps introduction and philosophy
- SDLC to DevOps transition
- Agile + DevOps alignment
- Build, release, and DevOps lifecycle

🌿 Version Control

- Git basics and commands
- GitHub repository management
- Branching, commit, and push
- Pull request workflow

⚙️ CI/CD & Jenkins

- CI/CD concepts and principles
- Jenkins setup and jobs
- Pipeline basics and triggers
- Maven / npm build automation

🐳 Docker & Cloud

- Docker images and containers
- Dockerfile and Docker Compose
- AWS / Azure cloud basics
- Deployment flow overview

6-MODULE CURRICULUM

Course Modules at a Glance

1	**DevOps Fundamentals** DevOps introduction, lifecycle, SDLC vs DevOps, agile delivery, build and release process basics.
2	**Git and GitHub** Repository setup, clone, branch, commit, push, pull, merge, pull request, and full GitHub workflow.
3	**CI/CD with Jenkins** Jenkins setup, build jobs, build triggers, pipeline basics, automated builds, and artifact generation.
4	**Build Tools & Deployment** Maven/npm build basics, environment setup, deployment steps, and end-to-end release workflow.
5	**Docker & Containers** Docker basics, images, containers, Dockerfile authoring, Docker commands, and containerized application flow.
6	**Cloud Basics & Real-Time Project** AWS/Azure basics, cloud deployment flow, CI/CD project delivery, GitHub portfolio setup, and interview prep.

SUCCESS ROADMAP

Your 2-Month DevOps Success Roadmap

A structured, milestone-driven journey designed to take you from complete beginner to a confident, deployment-ready DevOps learner — in just 8 focused weeks.

🗓️ Month 1 — Foundation

DevOps basics, SDLC flow, Agile, Git, GitHub, build process, Jenkins fundamentals, and CI/CD pipeline concepts.

1

2

🗓️ Month 2 — Docker + Cloud + Project

Docker containers, Dockerfile, deployment flow, cloud basics (AWS/Azure), real-time CI/CD project, resume prep, and mock interviews.

🏅 Final Outcome

3

Beginner → DevOps-Ready Learner with a live CI/CD project, GitHub portfolio, and interview readiness.

2

Months Duration

Intensive, focused learning

6

Core Modules

Structured curriculum

3

Live Projects

Portfolio-ready deliverables

5+

Tools Mastered

Git, Jenkins, Docker & more

MONTH 1

DevOps Foundation Month

Focus: Build strong DevOps and CI/CD fundamentals — the bedrock for everything that follows.

Topics Covered

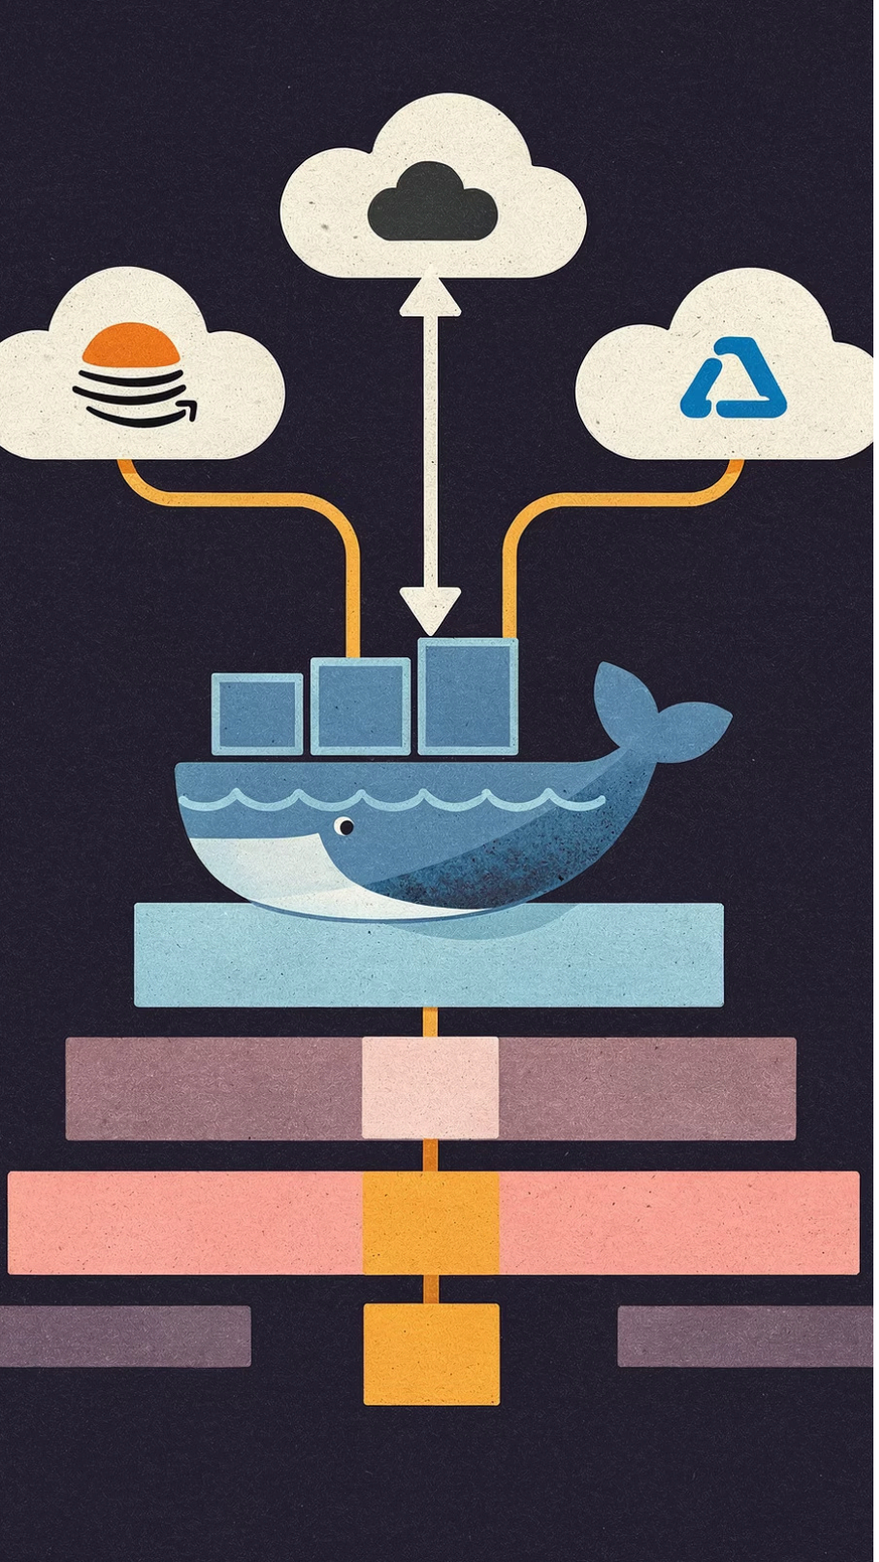

- DevOps introduction and philosophy
- SDLC to DevOps transition flow
- Agile and DevOps alignment
- Build and release process
- Git basics and GitHub repositories
- Branching, merging, pull requests
- Jenkins introduction and setup
- Build job creation and triggers
- CI/CD concepts and pipeline basics
- Maven / npm build fundamentals

Month 1 Outcome

By the end of Month 1, you will be able to:

- → Explain DevOps workflow
- → Manage code with Git & GitHub
- → Create Jenkins build jobs
- → Describe CI/CD pipeline basics

MONTH 2

Docker + Cloud + Project Month

Focus: Become deployment-ready through hands-on Docker, cloud basics, and a complete real-time CI/CD project.

Topics Covered

- Docker introduction and architecture
- Docker images, containers, commands
- Dockerfile and Docker Compose basics
- Application containerization flow
- Cloud basics — AWS and Azure overview
- Deployment flow and pipeline integration
- Jenkins + GitHub + Docker pipeline
- Real-time CI/CD project practice
- Resume preparation and portfolio setup
- Mock interview practice sessions

Month 2 Outcome

By the end of Month 2, you will be able to:

→ Dockerize applications confidently

→ Understand cloud deployment basics

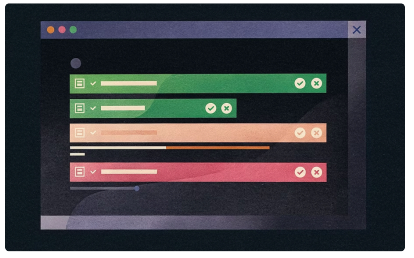

→ Build a complete CI/CD pipeline

→ Walk into interviews prepared

REAL-TIME PROJECTS

Hands-On DevOps Project Practice

Every student completes three structured projects that mirror real-world DevOps scenarios — building a GitHub portfolio you can confidently showcase to employers.

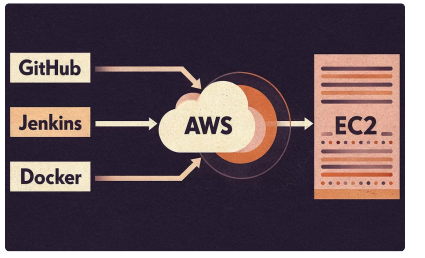

Project 1 — CI/CD Pipeline with Jenkins

Create a GitHub repository, configure a Jenkins job, set up build triggers, run build commands, and walk through a complete automated pipeline flow from commit to artifact.

Project 2 — Dockerized Web Application

Write a Dockerfile from scratch, build a Docker image, run a container, expose the application port, and verify the containerized app is working end-to-end.

Project 3 — Cloud Deployment Basics

Deploy a simple application using GitHub, Jenkins, Docker, and a basic AWS or Azure cloud deployment flow — demonstrating a complete DevOps delivery cycle.
